DETAI9LED OFFICE ACTION

Rejections Under 35 USC 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 24 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim contains subject matter that was not described in the specification so as to reasonably convey to one skilled in the relevant art that the inventors, at the time the application was filed, had possession of the claimed invention. Claim 24 appears to lacks description in the specification. The processes described in the specification require diluting the cooled reaction product with water to precipitate. Claim 24 does not require that step. This is a new matter rejection.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3, 6 and 10-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 is unclear as written. Claim 1 requires that the r be precipitated and then filtered and dried. But, claim 3 states that the precipitated (and thus, one assumes, not vet filtered r) is "extracted with a water immiscible solvent. However, this doe not quite

make sense. A solution is extracted. If the material product is a precipitate, then it is dissolved. Once it is dissolved, the filtration step, required by claim 1, can no longer be done, since this crude precipitate no longer exists. It is possible that what is meant is that the filtered r is dissolved, but that is not what the claim states.

Claim 3, step d, seems to be unconnected. The extract has been concentrated to produce the r precipitate, but it is not possible to determine what happens next. This appears to be supported at page 8, lines 13-18. However, that passage states that one must use an aqueous solvent "selected from". There are aqueous mixtures of certain solvents. Claim 3 would cover, e.g., water alone.

Claims 6 and 10-15 are ultimately dependent on claim 3.

Allowed Claims

Claims 1, 4, 5, 7-9, and 16-22 and allowed. An examiner's statement of reasons for indicating allowed claims can be found in the Office Action of Feb. 11, 2008.
